

GAGAN BIDARALLI

8088519311 | gaganbidaralli@gmail.com | www.linkedin.com/in/gaganbidaralli | <https://github.com/gaganbidaralli>

EDUCATION

BNM Institute of Technology (Autonomous) B.E. in Computer Science - CGPA: 8	2023-2027
KLE'S Prerana Pu College Percentage: 89%	2021-2023
St.John Samaritan English Medium School Percentage: 85%	2017-2021

SKILLS

Languages:	Java, Python, C, JavaScript, MySQL, MongoDB
Web Technologies:	HTML, CSS, Node.js, Express.js, React.js, Next.js, RESTful APIs
Core Concepts:	Data Structures & Algorithms, OOP, OS
Tools & Platforms:	Git & GitHub, AWS, Linux basics
Soft Skills:	Communication, Time Management, Teamwork, Problem Solving

INTERNSHIPS

Deep Learning & Reinforcement Learning

- Completed a 4-week internship at E2E Management Services
- Built and trained ML models using TensorFlow/PyTorch
- Developed and deployed deep learning models achieving accuracy on real-world datasets

PROJECTS

City Copilot – AI Powered Civic Issue Reporting System

Built a scalable civic issue reporting web application using Flask and MongoDB that allows users to report and track civic problems. The system integrates IBM Generative AI services to automatically classify issues and generate responses. The backend services were deployed on AWS EC2, and the application uses API-based communication to manage complaint submissions, tracking IDs, and real-time updates.

Airbnb Clone – Full Stack Web Application

Built a full-stack Airbnb clone using React.js for the frontend and Node.js with Express.js for the backend, implementing core functionalities such as property listings, user authentication, booking management, and search features. The application uses MongoDB for storing user and property data, and REST APIs were developed to handle communication between the frontend and backend while maintaining a responsive user interface similar to the Airbnb platform.

Smart Grocery Box – IoT Based Inventory Automation

Designed and developed a Smart Grocery Box using an ultrasonic sensor and ESP32 to detect empty containers. Automatically places grocery orders through an integrated web application when items run low. Aims to automate kitchen inventory management and reduce manual tracking. Used Arduino, ESP32, Firebase, and a custom web app built with HTML, CSS, and JavaScript.

ACHIEVEMENTS

- Presented the KMRL Fleet Allocation System at NASSCOM Tech Developer Confluence 2025, held at Radisson Blu, Marathahalli, Bengaluru
- Finalist in the IBM Hackathon, developing a functional software prototype under time constraints

CERTIFICATES

- Introduction to IoT (NPTEL)
- Deep learning and Generative AI
- Full-Stack Web Development (Udemy)
- AWS Cloud Practitioner Essentials

LANGUAGES

English, Hindi, Kannada
